

# ALVA MFT Pro

## The Future of Electrical Testing

The Di-LOG DLEVLite is a compact and purpose-built Type 2 EVSE adaptor plug, designed to support UK electricians carrying out 18th Edition EVSE verification using a compatible multifunction tester (MFT). Whether commissioning a new charge point or performing routine EV maintenance, the DLEVLite enables safe and efficient Mode 3 EV charger testing, by simulating a connected electric vehicle.

Developed to integrate seamlessly with MFTs via 4mm test sockets, the DLEVLite provides confirmation of Control Pilot (CP) signal integrity and allows detection of CP Error “E”, helping identify signal faults and installation wiring issues. Its ergonomic, field-ready design makes it a perfect companion for EV charge point installers working with Type 2 outlets.

- **Type 2 EVSE Testing Support:** Enables full simulation of a connected EV for Mode 3 single-phase charge point verification.
- **Direct Plug-In Design:** Plugs straight into Type 2 EV charging sockets for fast setup and simple operation.
- **Control Pilot Signal Monitoring:** Checks for CP signal presence, confirming EVSE communication status.
- **CP Error “E” Detection:** Flags faults in the Control Pilot signal that may indicate incorrect wiring or damaged hardware.
- **Multifunction Tester Compatibility:** Works with most MFTs using standard 4mm test leads for continuity and signal checks.
- **Compact & Portable:** Designed for quick deployment and reliable operation in domestic and commercial environments.
- **Durable Construction:** Tough ABS casing ensures resilience in everyday field conditions.
- **Supports 18th Edition EV Testing Requirements:** Aids compliance with current UK wiring regulations for EVSE installations.
- **Single-Phase Testing Focus:** Ideal for testing residential and light commercial EV chargers with Type 2 connectors.
- **Supplied with Protective Carry Case:** Keeps your adaptor safe and organised while on the move or in storage.
